Work History

2020-07 – Currently
working

Full Stack React Developer
ATMT Software, Hyderabad

- I have **3 years of experience as a Full Stack React Developer** in healthcare and e-commerce domains. **UI Designing and App Interface coding.**
- I collaborated with clients and UX designers to align web application designs with branding and strategy. **Code Debugging & Front-end Architecture**
- I worked closely with Business Analysts to define technical requirements and created use cases. My responsibilities included UI/UX design, coding, testing, and implementing updates in React JS.
- I also handled bug fixes, code reviews, and ensured cross-browser compatibility.

Education

2011-03 - 2013-06

MBA: Marketing
IFIM B School - Bangalore

Projects

Project 1 (Thread - Fashion-Tech Startup):

- Developed a personalized shopping web and mobile app for Thread, a UK fashion-tech startup.
- Implemented user authentication and database verification.
- Added new features and functionalities, including product ordering and cart management.
- Ensured adherence to industry and usability standards.
- Enhanced user experience with checkout and order status features.

Project 2 (AbbVie Pharmaceutical):

- Crafted a stable and maintainable React-based web app for AbbVie.
- Provided online patient assistance and research updates.
- Leveraged ES6 features, such as arrow functions and promises.
- Achieved cross-device compatibility through media queries.
- Ensured codebase quality and performance.

Project 3 (Imperfect Foods - Food Waste Reduction):

- Developed cross-browser compatible and responsive web pages.
- Translated UI/UX designs into code for Imperfect Foods, a US-based food waste reduction company.
- Utilized React developer tools for debugging.
- Supported development and modified application requirements.
- Contributed to a sustainable food system and efficient delivery.

Project 4 (Micro Bio Health - Health Services):

- Created a web-based application for Micro Bio Health, a UK company offering health consultations and tests.
- Utilized React, JavaScript, and Redux for user interface design.
- Managed version control with Git and GitHub.
- Collaborated with an agile team to deliver end-to-end solutions.
- Provided healthcare services online, including microbiome testing.

Project 5 (Stock Market Agency - Financial Web App):

- Designed and developed a stock market web app with robust API integration.
- Integrated real-time data from leading financial APIs.
- Implemented secure user authentication and a responsive UI.
- Optimized performance for handling large datasets.
- Deployed on cloud infrastructure for scalability and reliability, serving a Hyderabad-based financial agency.
